Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	Healthcare
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	myeloid progenitors. These progenitors reside in the bone marrow, where they are maintained by the stem cell niche, which includes stromal cells and cytokines. The most common myeloid neoplasms include: Acute myeloid leukemia
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	myeloid cells and include acute myeloid leukemia (AML), chronic myeloid leukemia (CML), myelodysplastic syndromes (MDS), and myeloproliferative neoplasms (MPN).\nMyeloid neoplas
